

# The Fast Multipole Algorithm vs. the Particle Mesh Ewald Method

Joshua Nelson, u4850020

COMP3006 - Research Project

November 1, 2012

# The N body problem

## Statement of the problem

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

The N body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

*Given  $N$  bodies that all interact with each other in some way, how do we efficiently calculate the effect each body has on every other body?*

# The N body problem

## History

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

**Joshua Nelson,**  
**u4850020**

The N body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

- First formally specified by Isaac Newton

# The N body problem

Ewald Method

Results

Conclusion

# The N body problem

## Applications

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

**Joshua Nelson,**  
**u4850020**

The N body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

# The basic solution

## Algorithm

- Say that a particle at position  $r_i$  with charge  $q_i$  gives a potential  $Q$  at a particle  $r_j$  with charge  $q_j$  according to the formula

$$Q = \frac{q_i * q_j}{|r_i - r_j|}$$

# The basic solution

## Algorithm

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

The N body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

- Say that a particle at position  $r_i$  with charge  $q_i$  gives a potential  $Q$  at a particle  $r_j$  with charge  $q_j$  according to the formula

$$Q = \frac{q_i * q_j}{|r_i - r_j|}$$

- For each particle pair, calculate the the interaction according to the above formula

# The basic solution

## Algorithm

- Say that a particle at position  $r_i$  with charge  $q_i$  gives a potential  $Q$  at a particle  $r_j$  with charge  $q_j$  according to the formula

$$Q = \frac{q_i * q_j}{|r_i - r_j|}$$

- For each particle pair, calculate the the interaction according to the above formula
- Use the potential at each particle to calculate the force, and move the particle according to this force.

# The basic solution

## Algorithm

- Say that a particle at position  $r_i$  with charge  $q_i$  gives a potential  $Q$  at a particle  $r_j$  with charge  $q_j$  according to the formula

$$Q = \frac{q_i * q_j}{|r_i - r_j|}$$

- For each particle pair, calculate the the interaction according to the above formula
- Use the potential at each particle to calculate the force, and move the particle according to this force.
- Order  $O(n^2)$  complexity.

# The Fast Multipole Algorithm

Well separated cells

		x	x	x	x	x	x
		x	x	x	x	x	x
		x				x	x
		x		•		x	x
		x				x	x
		x	x	x	x	x	x

# The Fast Multipole Algorithm

## Expansions

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

The N-body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

- Multipole Expansions: A series, centered on a particular cell, which can approximate the potential from the cell's particles near that cell

# The Fast Multipole Algorithm

## Expansions

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

The N-body  
problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

- Multipole Expansions: A series, centered on a particular cell, which can approximate the potential from the cell's particles near that cell
- Local Expansions: A series, centered on a particular cell, formed from a Multipole Expansion, which approximates the potential from within the cell at some distance away from that cell.

# The Fast Multipole Algorithm

## Aggorithm

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

- Form Multipole Expansions at the lowest mesh level

The N body  
problem

problem

The basic  
solution

The Fast  
Multipole  
Algorithm

Particle Mesh  
Ewald Method

Results

Conclusion

# Particle Mesh Ewald Method

## Basic structure of the Particle Mesh Ewald Method

### Basic structure of the Particle Mesh Ewald Method

- Interpolate particles to a grid
- Perform a fourier transformation on the grid
- Calculate long range potential in reciprocal space using this grid
- Return to real space using another fourier transformation

# Particle Mesh Ewald Method

## Basic structure of the Particle Mesh Ewald Method

### Basic structure of the Particle Mesh Ewald Method

- Interpolate particles to a grid
- Perform a fourier transformation on the grid
- Calculate long range potential in reciprocal space using this grid
- Return to real space using another fourier transformation
- Calculate in real space directly for near particles, and use interpolated grid values for the long range potential.

# Particle Mesh Ewald Method

## Characteristics of the Particle Mesh Ewald Method

The Fast  
Multipole  
Algorithm vs.  
the Particle  
Mesh Ewald  
Method

Joshua Nelson,  
u4850020

## Characteristics of the Particle Mesh Ewald Method

- Complexity of  $O(n\log(n))$
